## Market Overviews

### Clinical

The clinical market segments are similar to the medical segments described below, except that a clinician would provide the monitor to a patient, but the patient, instead of a physician, would have primary responsibility for monitoring the data. There are two clinical market segments: cardiovascular and fertility.

### Law

For these markets, a court order would require an offender to wear the monitor, continually transmitting toxicology and location data to law enforcement, generally over the course of several days or weeks. Police departments and other government organizations would purchase the monitors to measure alcohol or different families of drugs in the bloodstream of individuals, mostly parolees. These markets are made up of six independent segments. In each segment, the agencies care about a different type of toxicology monitoring, but they all care about tracking the location of the monitored individuals, and the ability to receive continuous data updates over a cellular network, as opposed to Bluetooth, connection (with rough equivalence between the 2.4 GHz and 5 GHz options).

### Medical

These markets consist of physicians monitoring patients who are undergoing various therapies. There are 14 independent market segments made up of different medical practices. A department or physician would purchase a monitor appropriate for their specific practice, provide it to a patient as part of that patient's treatment, and then review the collected data online. Selling a monitor to one segment would have no effect on the consumers in the other medical segments.

### Military

There is significant ongoing military conflict taking place in one of the regions. In this conflict, soldiers are often exposed to dangerous chemical weapons. As soldiers are deployed, the military would like to outfit them with monitors that detect a single neurotoxin suspected of being used at the current time.

### Trainers (Athlete)

This market segment consists of personal trainers selling monitors to their athlete clients. The primary interest is for a device that continuously monitors some combination of motion, pulse, blood pressure, and certain dissolved gasses in the bloodstream. In addition, the trainers and their clients value other features related to the general usability and convenience of the devices. Finally, unlike some of the other market segments, consumers in this market will pay a premium if the product finish matches their personal taste. In fact, consumers in a small segment (10-15%) of this market are prone to fad-like behavior, and would pay a substantial premium for a finish and platform combination that they consider fashionable, disdaining all other product varieties. Such a fad is difficult to predict, and while it could grow quickly, it could taper off quickly, as well.

---

## Feature Descriptions

### Platform

The electronics and monitors are added to a wearable “platform” that keeps the monitors close to the skin. People that wear the monitors prefer smaller monitors (wrist bands) over larger monitors that would typically be worn under clothes. Some markets (e.g., general population, fashion-conscious consumers) have a stronger preference for this than others.

### GPS

Adding a GPS to monitors allows the monitor results to be correlated with location. This feature is imperative for some markets (e.g., law enforcement), and nice-to-have for others.

### Network

To be useful the monitor must be able to transmit data for storage on another device like a smartphone or a device on the cloud. Bluetooth transmits data to a smartphone or other hand-held device. The 2.4 GHz and 5 GHz interfaces allow the monitor to transmit data over cellular networks. As with GPS, this is a very important requirement for certain markets.

### Power

The monitor must have power to work, and it is designed to run on a rechargeable battery. The nickel cadmium (Ni-Cd) battery is small but basic; it can only last a few hours on full charge. The polymer battery, while of similar size to the Ni-Cd, is lighter and can last several days on one charge. The two battery pack power options simply combine multiple batteries (of either the nickel cadmium or polymer variety, depending on the type of pack) into an arrangement that is wearable around the waist, which while rather bulky and heavy for the casual user, has the merit of increasing the time between charges by a factor of about ten.

### Finish

The original monitor encapsulates the hardware in utilitarian plastic, which is functional, but not particularly appealing. The monitor could be encapsulated in dyed or painted plastic, with matching materials for the platform garment. Current customers have not requested new finishes but the sales representatives hope that a more fashionable looking monitor might drive downstream demand, particularly in athletic markets.

## Clinical Cardiovascular Market

The clinicians in the cardiovascular market are mainly concerned with patients exhibiting high-normal to high blood pressure symptoms, undergoing physical therapy or arduous physical strain in athletic exertion, or working in hazardous environmental conditions. Clinicians in this market are primarily interested in a full profile blood pressure monitor (which could replace on-site assessments costing \$100-\$200), the ability to monitor a variety of dissolved gasses in the bloodstream, and the ability to keep track of a patient's location during the monitoring process.

### Regional Market Size

| Region            | Market Size   |
|-------------------|---------------|
| Serenity          | 1,500-2,500   |
| Metropolis        | 30,000-50,000 |
| Each Other Region | 15,000-25,000 |

### Bass Model Parameters

| Parameter                                                  | Value  |
|------------------------------------------------------------|--------|
| <b>p</b>                                                   | 0.0002 |
| incremental <b>p</b> from every \$500 in daily advertising | 0.0002 |
| <b>q</b>                                                   | 0.0035 |

*Note: incremental p from advertising only applies to the product on which it is spent, in the distribution center where it is spent, and on the day that it is spent.*

### Willingness to Pay (WTP)

| Base Features<br>(Blood Pressure +<br>Dissolved Gasses) | WTP     |
|---------------------------------------------------------|---------|
| Systolic + O2 + GPS                                     | 40-290  |
| Systolic & Diastolic<br>+ O2, N2, CO2 + GPS             | 85-380  |
| Full profile Blood +<br>Dissolved Gasses +<br>GPS       | 350-600 |

## Deal Breakers

- While not a total deal breaker for all customers, lack of GPS can significantly drive down the perceived value of the product, since it's seen as a safety mechanism for patients who might experience an acute episode endangering their health.

## Other Considerations

- The range of willingness to pay reflects a reasonable grouping of attributes beyond the base feature listed in the table.
- Minor considerations such as the availability of some heartbeat monitoring functionality, the convenience of various power configurations and the appeal of upgraded product finishes may also affect WTP.
- Average Days Sales Outstanding (DSO) = 30.

## Clinical Fertility Market

The fertility B2C market is made up of women who are interested in continually monitoring their fertility cycles. They currently can buy a device that will monitor their Reproductive LH at a cost of \$50-\$150. Your company is capable of creating a more convenient version of this device, as well as a combined LH / FSH device that will increase the monitor's precision.

### Regional Market Size

| Region            | Market Size    |
|-------------------|----------------|
| Serenity          | 0-5,000        |
| Metropolis        | 90,000-110,000 |
| Each Other Region | 40,000-60,000  |

### Bass Model Parameters

| Parameter                                                  | Value   |
|------------------------------------------------------------|---------|
| <b>p</b>                                                   | 0.00025 |
| incremental <b>p</b> from every \$500 in daily advertising | 0.00025 |
| <b>q</b>                                                   | 0.004   |

*Note: incremental p from advertising only applies to the product on which it is spent, in the distribution center where it is spent, and on the day that it is spent.*

### Willingness to Pay (WTP)

| Base Feature (Hormone) | WTP     |
|------------------------|---------|
| LH                     | 130-300 |
| LH / FSH               | 230-400 |

## Deal Breakers

- The discomfort of wearing bulky battery packs.

## Other Considerations

- The end users in this market have a slight preference for wearing devices on their wrists and rather dislike wearing them around their chests.
- Minor considerations regarding GPS connectivity and upgraded product finishes may also affect WTP.
- The range of willingness to pay reflects a reasonable grouping of attributes beyond the base feature listed in the table.
- Average Days Sales Outstanding (DSO) = 10.

## Law Markets

In these markets, most of the time a court order would require an offender to wear a monitor, continually transmitting the data to law enforcement. There are competing devices for ethanol but no monitors for the other substances.

## Regional Market Size

| Region                   | Market Size (Ethanol) | Market Size (Amphetamine) | Market Size (THC) | Market Size (Barbiturate) | Market Size (Narcotic) |
|--------------------------|-----------------------|---------------------------|-------------------|---------------------------|------------------------|
| <b>Serenity</b>          | 1,000-2,000           | 250-750                   | 250-750           | 250-750                   | 250-750                |
| <b>Metropolis</b>        | 40,000-80,000         | 10,000-30,000             | 10,000-30,000     | 10,000-30,000             | 10,000-30,000          |
| <b>Each Other Region</b> | 20,000-40,000         | 5,000-15,000              | 5,000-15,000      | 5,000-15,000              | 5,000-15,000           |

## Bass Model Parameters

| Parameter                                                  | Value   |
|------------------------------------------------------------|---------|
| <b>p</b>                                                   | 0.00025 |
| incremental <b>p</b> from every \$500 in daily advertising | 0.00025 |
| <b>q</b>                                                   | 0.0025  |

*Note: incremental p from advertising only applies to the product on which it is spent, in the distribution center where it is spent, and on the day that it is spent.*

## Willingness to Pay (WTP)

| Base Feature (Toxicology) | WTP         |
|---------------------------|-------------|
| <b>Ethanol</b>            | 900-1,000   |
| <b>Amphetamine</b>        | 1,100-1,300 |
| <b>THC</b>                | 1,000-1,200 |
| <b>Barbiturate</b>        | 1,100-1,300 |
| <b>Narcotic</b>           | 1,100-1,600 |

## Deal Breakers

- Lack of GPS.
- Lack of cellular network connectivity.

## Other Considerations

- The range of willingness to pay reflects a reasonable grouping of attributes beyond the base feature listed in the table.
- Minor considerations such as the utility of various power configurations, the exact GHz bandwidth of the cellular network connection, and the appeal of upgraded product finishes may also affect WTP.
- Average Days Sales Outstanding (DSO) = 90.

## MD Cancer Markets

The cancer markets consist of oncologists monitoring patients who are undergoing courses of therapies that can cost tens of thousands of dollars. The base panel monitors common biomarkers for most common cancers. The other monitors add specific checks for less common biomarkers and common drugs to treat those specific types of cancer.

## Regional Market Size

| Region            | Market Size (Prostate) | Market Size (Breast) | Market Size (Bladder & Kidney) | Market Size (Lymphoma) | Market Size (Blood & Bone) |
|-------------------|------------------------|----------------------|--------------------------------|------------------------|----------------------------|
| Serenity          | 500-1,000              | 500-1,000            | 500-1,000                      | 500-1,000              | 500-1,000                  |
| Metropolis        | 20,000-40,000          | 20,000-40,000        | 20,000-40,000                  | 20,000-40,000          | 20,000-40,000              |
| Each Other Region | 10,000-20,000          | 10,000-20,000        | 10,000-20,000                  | 10,000-20,000          | 10,000-20,000              |

## Bass Model Parameters

| Parameter                                                  | Value  |
|------------------------------------------------------------|--------|
| <b>p</b>                                                   | 0.0002 |
| incremental <b>p</b> from every \$500 in daily advertising | 0.0002 |
| <b>q</b>                                                   | 0.0035 |

*Note: incremental p from advertising only applies to the product on which it is spent, in the distribution center where it is spent, and on the day that it is spent.*

## Willingness to Pay (WTP)

| Base Feature (Cancer) | WTP       |
|-----------------------|-----------|
| Base Panel            | 0-900     |
| Prostate              | 900-1,600 |
| Breast                | 900-1,600 |
| Bladder & Kidney      | 900-1,700 |
| Lymphoma              | 900-1,700 |
| Blood & Bone          | 900-1,800 |

## Deal Breakers

- None.

## Other Considerations

- The range of willingness to pay reflects a reasonable grouping of attributes beyond the base feature listed in the table.
- Minor considerations such as the convenience of various power configurations, GPS connectivity, and the appeal of upgraded product finishes may also affect WTP.
- Average Days Sales Outstanding (DSO) = 30.

## MD Dissolved Gasses Market

This market consists of physicians directly monitoring patients for the full range of dissolved gasses in the bloodstream. There are some competitive products available at prices ranging from \$50 to upwards of \$250, but your monitor promises to have higher efficacy and reliability. A medical department or physician would purchase such a monitor and provide it to a patient as part of that patient's treatment, and then review the collected data online.

### Regional Market Size

| Region            | Market Size   |
|-------------------|---------------|
| Serenity          | 500-1,000     |
| Metropolis        | 20,000-40,000 |
| Each Other Region | 10,000-20,000 |

### Bass Model Parameters

| Parameter                                             | Value  |
|-------------------------------------------------------|--------|
| $p$                                                   | 0.0002 |
| incremental $p$ from every \$500 in daily advertising | 0.0002 |
| $q$                                                   | 0.0035 |

*Note: incremental  $p$  from advertising only applies to the product on which it is spent, in the distribution center where it is spent, and on the day that it is spent.*

### Willingness to Pay (WTP)

| Base Feature (Dissolved Gasses) | WTP     |
|---------------------------------|---------|
| Full C, N, O                    | 350-550 |

## Deal Breakers

- None.

## Other Considerations

- The range of willingness to pay reflects a reasonable grouping of attributes beyond the base feature listed in the table.
- Minor considerations such as the convenience of various power configurations, GPS connectivity, and the appeal of upgraded product finishes may also affect WTP.
- Average Days Sales Outstanding (DSO) = 30.

## MD Fertility Markets

There are 3 MD Fertility markets made up of physicians who are interested in using your estrogen, progesterone and testosterone monitoring devices in lieu of sequences of blood tests costing several hundred dollars.

### Regional Market Size

| Region            | Market Size (Estrogen) | Market Size (Progesterone) | Market Size (Testosterone) |
|-------------------|------------------------|----------------------------|----------------------------|
| Serenity          | 500-1,000              | 500-1,000                  | 500-1,000                  |
| Metropolis        | 20,000-40,000          | 20,000-40,000              | 20,000-40,000              |
| Each Other Region | 10,000-20,000          | 10,000-20,000              | 10,000-20,000              |

### Bass Model Parameters

| Parameter                                             | Value  |
|-------------------------------------------------------|--------|
| $p$                                                   | 0.0002 |
| incremental $p$ from every \$500 in daily advertising | 0.0002 |
| $q$                                                   | 0.0035 |

*Note: incremental  $p$  from advertising only applies to the product on which it is spent, in the distribution center where it is spent, and on the day that it is spent.*

### Willingness to Pay (WTP)

| Base Feature (Hormone) | WTP     |
|------------------------|---------|
| Estrogen               | 575-965 |
| Progesterone           | 575-965 |
| Testosterone           | 575-965 |

## Deal Breakers

- None.

## Other Considerations

- The range of willingness to pay reflects a reasonable grouping of attributes beyond the base feature listed in the table.
- Customers in these markets have a slight preference for wearing devices on their wrists and dislike to wear them around their chests.
- Minor considerations such as the convenience of various power configurations, GPS connectivity, and the appeal of upgraded product finishes may also affect WTP.
- Average Days Sales Outstanding (DSO) = 30.

## MD Heart Market

This market is comprised mainly of cardiovascular physicians who provide monitors to patients concerned with heart disease. The temporal monitor might be a convenient replacement for on-site evaluations that cost \$250-\$500.

### Regional Market Size

| Region            | Market Size   |
|-------------------|---------------|
| Serenity          | 0-5,000       |
| Metropolis        | 40,000-80,000 |
| Each Other Region | 20,000-40,000 |

### Bass Model Parameters

| Parameter                                                  | Value  |
|------------------------------------------------------------|--------|
| <b>p</b>                                                   | 0.0002 |
| incremental <b>p</b> from every \$500 in daily advertising | 0.0002 |
| <b>q</b>                                                   | 0.0035 |

*Note: incremental p from advertising only applies to the product on which it is spent, in the distribution center where it is spent, and on the day that it is spent.*

### Willingness to Pay (WTP)

| Base Feature (Heartbeat) | WTP     |
|--------------------------|---------|
| Pulse only               | 0-115   |
| Temporal                 | 600-865 |

## Deal Breakers

- While not a complete deal breaker for all customers, lack of GPS can significantly drive down the perceived value of the product, since it's seen as a safety mechanism for dealing with patients who might experience an acute cardiovascular episode.

## Other Considerations

- The range of willingness to pay reflects a reasonable grouping of attributes beyond the base feature listed in the table.
- Minor considerations such as the convenience of various power configurations and the appeal of upgraded product finishes may also affect WTP.
- Average Days Sales Outstanding (DSO) = 30.

## MD Metabolic Markets

These markets consist of physicians who would normally put patients through sequences of multiple blood tests to monitor specific metabolic medical conditions. Physicians in these markets might choose to instead provide your monitors to patients, in some cases to avoid office visits and in other cases to track conditions that would be impossible to monitor with a short office visit. There are 4 small, independent market segments made up of different medical practices. A department or physician would purchase a monitor appropriate for their specific practice, provide it to a patient as part of that patient's treatment, and then review the collected data online. Selling a monitor to one segment would have no effect on the consumers in the other medical segments.

## Regional Market Size

| Region            | Market Size (Thyroxine) | Market Size (Bilirubin) | Market Size (Proteins) | Market Size (Uric Acid) |
|-------------------|-------------------------|-------------------------|------------------------|-------------------------|
| Serenity          | 500-1,000               | 500-1,000               | 500-1,000              | 500-1,000               |
| Metropolis        | 20,000-40,000           | 20,000-40,000           | 20,000-40,000          | 20,000-40,000           |
| Each Other Region | 10,000-20,000           | 10,000-20,000           | 10,000-20,000          | 10,000-20,000           |

## Bass Model Parameters

| Parameter                                                  | Value  |
|------------------------------------------------------------|--------|
| <b>p</b>                                                   | 0.0002 |
| incremental <b>p</b> from every \$500 in daily advertising | 0.0002 |
| <b>q</b>                                                   | 0.0035 |

*Note: incremental p from advertising only applies to the product on which it is spent, in the distribution center where it is spent, and on the day that it is spent.*

## Willingness to Pay (WTP)

| Base Feature | WTP       |
|--------------|-----------|
| Thyroxine    | 750-1,300 |
| Bilirubin    | 750-1,300 |
| Proteins     | 900-1,450 |
| Uric Acid    | 750-1,300 |

## Deal Breakers

- None.

## Other Considerations

- The range of willingness to pay reflects a reasonable grouping of attributes beyond the base feature listed in the table.
- Minor considerations such as the convenience of various power configurations, GPS connectivity, and the appeal of upgraded product finishes may also affect WTP.
- Average Days Sales Outstanding (DSO) = 30.

## Military Markets

There are four independent military market segments, each aligned with one of the following chemicals: botulinum, anatoxin-a, sarin & cyclosarin, and soman. The military cares greatly about GPS location tracking and long-lasting battery life of the monitors on the battlefield, and to a lesser degree about network connectivity and colors that will not make the soldiers stand out to the enemy.

### Regional Market Size

| Region                   | Market Size (Botulinum) | Market Size (Anatoxin-a) | Market Size (Sarin & Cyclosarin) | Market Size (Soman) |
|--------------------------|-------------------------|--------------------------|----------------------------------|---------------------|
| <b>Serenity</b>          | 100,000-140,000         | 50,000-70,000            | 70,000-90,000                    | 50,000-70,000       |
| <b>Each Other Region</b> | 0                       | 0                        | 0                                | 0                   |

### Bass Model Parameters

| Parameter                                                  | Value  |
|------------------------------------------------------------|--------|
| <b>p</b>                                                   | 0.0003 |
| incremental <b>p</b> from every \$500 in daily advertising | 0.0003 |
| <b>q</b>                                                   | 0.0045 |

*Note: incremental p from advertising only applies to the product on which it is spent, in the distribution center where it is spent, and on the day that it is spent.*

### Willingness to Pay (WTP)

| Base Feature (Neurotoxins)    | WTP         |
|-------------------------------|-------------|
| <b>Botulinum</b>              | 800-1,300   |
| <b>Anatoxin-a</b>             | 800-1,300   |
| <b>Sarin &amp; Cyclosarin</b> | 1,000-1,300 |
| <b>Soman</b>                  | 800-1,200   |

## Deal Breakers

- While not a complete deal-breaker, lack of GPS will put a significant dent in the perceived value of the product.
- While not a complete deal-breaker, lack of the long-lasting polymer battery pack will put a significant dent in the perceived value of the product.

## Other Considerations

- The range of willingness to pay reflects a reasonable grouping of attributes beyond the base feature listed in the table.
- More minor considerations such as the product platform, the exact type of network connectivity, pulse and blood pressure tracking functionality, and the precise color of certain product finishes may also affect WTP.
- Average Days Sales Outstanding (DSO) = 60.

## Athlete and Athlete Fad Markets

Athletic stores are the main market for the step counter. The market is big but there are many competing products including smart phone apps and small devices. Monitors for balance and gait will have smaller markets, including athletic stores, trainers, physical therapists and chiropractors. In contrast to the other markets covered in this research document, willingness to pay estimates are provided for each feature.

Consumers in a small segment (10-15%) of this market are prone to fad-like behavior, and would pay a substantial premium (beyond what is listed below) for a finish and platform combination that they consider fashionable, disdaining all other product varieties. Such a fad is difficult to predict, and while it could grow quickly, it could taper off quickly, as well.

### Regional Market Size

| Region            | Market Size     |
|-------------------|-----------------|
| Serenity          | 5,000-15,000    |
| Metropolis        | 200,000-240,000 |
| Each Other Region | 100,000-130,000 |

### Bass Model Parameters

| Parameter                                                  | Value (General) | Value (Fad) |
|------------------------------------------------------------|-----------------|-------------|
| <b>p</b>                                                   | 0.0003          | 0.0009      |
| incremental <b>p</b> from every \$500 in daily advertising | 0.0003          | 0.0009      |
| <b>q</b>                                                   | 0.003           | 0.009       |

*Note: incremental p from advertising only applies to the product on which it is spent, in the distribution center where it is spent, and on the day that it is spent.*

### Willingness to Pay (WTP)

| Heartbeat           | WTP     |
|---------------------|---------|
| Pulse only          | 100-200 |
| Pulse plus temporal | 100-200 |

| Blood Vessel           | WTP   |
|------------------------|-------|
| Systolic only          | 25-30 |
| Systolic and diastolic | 30-40 |
| Full profile           | 30-40 |

| Dissolved Gasses                                  | WTP   |
|---------------------------------------------------|-------|
| O <sub>2</sub> only                               | 15-30 |
| O <sub>2</sub> , N <sub>2</sub> , CO <sub>2</sub> | 15-40 |
| Full C, N, O                                      | 15-40 |

| Motion                      | WTP   |
|-----------------------------|-------|
| Steps                       | 10-30 |
| Steps plus balance          | 25-50 |
| Steps plus balance and gait | 45-70 |

| Platform  | WTP (In Ascending Order)   |
|-----------|----------------------------|
| Chest     | generally lowest, 0-10     |
| Stockings | generally > chest          |
| Sleeves   | generally > stockings      |
| Wrists    | generally > sleeves, 25-50 |

### Deal Breakers

- The inconvenience of wearing bulky battery packs.
- For the consumers following a fad, designs without their preferred product finish or platform.

### Other Considerations

- Average Days Sales Outstanding (DSO) = 5.

## Product Design Guide

Different product features appeal in varying degrees to different market segments. Only one feature selection can be made for each product attribute.

| Attribute               | Feature              | Development Days | Development Cost | Materials Cost per Unit |
|-------------------------|----------------------|------------------|------------------|-------------------------|
| <b>Heartbeat</b>        | None                 | 3                | 1,000            | 0                       |
|                         | Pulse only           | 15               | 30,000           | 15                      |
|                         | Temporal             | 90               | 135,000          | 25                      |
| <b>Blood vessel</b>     | None                 | 3                | 1,000            | 0                       |
|                         | Systolic only        | 30               | 75,000           | 10                      |
|                         | Systolic & diastolic | 90               | 135,000          | 15                      |
|                         | Full profile         | 120              | 180,000          | 40                      |
| <b>Dissolved gasses</b> | None                 | 3                | 1,000            | 0                       |
|                         | O2 only              | 30               | 75,000           | 15                      |
|                         | O2, N2, CO2          | 90               | 135,000          | 20                      |
|                         | Full C, N, O         | 90               | 135,000          | 40                      |
| <b>Toxicology</b>       | None                 | 3                | 1,000            | 0                       |
|                         | Ethanol              | 30               | 150,000          | 95                      |
|                         | Amphetamine          | 90               | 250,000          | 140                     |
|                         | THC                  | 90               | 250,000          | 140                     |
|                         | Barbiturate          | 90               | 250,000          | 140                     |
|                         | Narcotic             | 90               | 250,000          | 140                     |
| <b>Hormone</b>          | None                 | 3                | 1,000            | 0                       |
|                         | LH                   | 30               | 45,000           | 20                      |
|                         | LH and FSH           | 60               | 75,000           | 50                      |
